

01 / PURPOSE AND EMOTIONAL DIRECTION

Purpose and emotional direction

Internal working document | Creator outreach pilot | Fieldbox 1.4 | August 2026

This brief gives selected creators the facts, scenarios, and emotional territory needed to explore Fieldbox in their own voice. It is not a script and not a consumer-facing advertisement. The objective is credible use, honest reaction, and useful product feedback.

WHAT'S IN IT FOR THE CREATOR?		
TRY FIELDBOX	RELEASE 1 VIDEO	RELEASE 3+ VIDEOS
One complimentary month of Fieldbox Pro. No posting obligation.	Release one Reel or TikTok during that complimentary month and receive a one-year license .	Release three or more Reels or TikToks during that same month and receive a lifetime license .
PUBLISHING WINDOW: THE COMPLIMENTARY MONTH		
Each qualifying video must be a public Reel or TikTok at least 20 seconds long, feature Fieldbox as a meaningful part of the video, and be released during the complimentary month. Include #FieldboxBackup and #FieldboxCrew01 in the published caption. Submit each link at fieldbox.app/creators/crew01-2026/submit/ .		

PRIMARY THOUGHT	Don't rely on one place to hold the moments you can't recreate.
-----------------	---

The tension to make tangible

WHAT IS AT RISK A memory card, camera, or bag may be the only physical place holding a shoot. Loss, damage, or corruption can happen before the work reaches a normal editing and backup system.	WHAT FIELDBOX CHANGES A creator can make a verified copy on an iPhone or iPad while still in the field, then add an offsite destination, share working files, or hand the session to an external drive.
--	---

Emotions to drive

RELIEF There is another verified copy before leaving the location.	FREEDOM Travel lighter and avoid opening or carrying a laptop.
CONTROL See what was copied, where copies exist, and what still needs attention.	MOMENTUM Send, share, or hand off files without pausing the whole production.
PROFESSIONALISM Treat backup and delivery as part of the job, not an afterthought.	CONTINUITY Move from capture to edit without leaving every file on one card.

Supporting language

- One card should never be the only place holding your work.
- A card can be lost, damaged, or corrupted. Make another copy while you still can.
- Your camera, card, and bag can disappear together. Your offsite copy doesn't have to.
- The shoot may be over. The risk of having only one copy isn't.

What success means: The creator finds a scenario relevant to their audience, demonstrates only what they actually used, and gives candid feedback. Positive sentiment is not required.

02 / VERIFIED 1.4 FEATURE INVENTORY

Verified 1.4 feature inventory

Use this as the factual menu. Creators do not need to mention every feature.

New or materially improved in 1.4

- Quick Transfer starts a new session with all files using saved defaults.
- Transfer progress is clearer while work is underway.
- An incomplete session can upload the files currently available on the device and report partial cloud coverage.
- Legacy coach marks were removed to simplify the first-use experience.

CAPABILITY	WHAT 1.4 DOES	TIER
New Transfer	Select file types directly, including unfamiliar extensions by default, and collect files from multiple cards or devices through multiple transfers into one session.	Core
Verified local copy	Copies to the app-managed archive, compares source and local SHA-256 values, and promotes a file into the archive only after verification succeeds.	Core
Original media	Fieldbox never writes to, erases, or formats the original card.	Core
Offline first	Create the verified archive without a network connection, then add cloud or NAS copies later.	Core
Session organization	Use session names and custom filename templates; bring files from several capture devices into one unified session.	Core
Browse and share	Browse supported photos, videos, RAW files, and audio. Create working copies through Share or Save to Photos when the format is supported by iOS.	Core
Cloud and NAS	Send copies to S3-compatible storage including Backblaze B2, Dropbox, Google Drive, OneDrive, or WebDAV/NAS.	Core
Backup Status	Shows the current copy inventory and whether the app's defined 3-2-1 conditions are met. It is a current status view, not a certificate or guarantee.	Core
Cloud Browser	Browse files stored in linked cloud or NAS accounts and bring a working copy into an editing or sharing flow.	Core
Quick Transfer	Start a new all-files session using saved defaults with fewer setup steps.	Core
Multiple destinations	Use multiple cloud destinations and concurrent uploads when the workflow needs more than one remote copy.	Pro
Shared cloud account	Several professionals can back up from their own devices to one cloud account. Device-specific namespaces prevent one device from overwriting or deleting another device's copy.	Pro
External Drive Copy	Copy one or multiple sessions to an attached external drive for client, editor, or production handoff.	Pro

Format note: regular production files can still be copied, verified, archived, exported, and replicated even when iOS cannot preview them natively. Preview and playback depend on the file format and codec.

03 / PROFESSIONAL SCENARIOS

Professional scenarios

Start with the pressure of the job, then show the workflow that releases it.

SCENARIO	HUMAN NEED	WHAT TO ILLUSTRATE	BOUNDARY
Event or concert photographer	The images have value immediately. The photographer wants another copy before leaving and may need to get selects to an editor or client right away.	Copy the card to iPhone or iPad, then use Share for selected working files and/or upload the session to the editor's or production company's cloud destination.	Fieldbox is not live tethering yet. Show card-based transfers in 1.4.
Unified production session	A production creates stills, video, 360 footage, and sound across several devices. Nobody wants files scattered across unrelated cards and folders.	Use multiple transfers to bring files from cameras, action cameras, 360 cameras, and audio recorders into one unified Fieldbox session.	A session is a logical collection, not a promise of one flat folder.
Browse and share for editing	The editor needs files while the creator is still traveling or working the event.	Browse supported media, create a working copy, and send it through Share; or place the session in a cloud destination the editor can access.	Native preview and playback depend on iOS format support.
Several professionals, one cloud account	A team works independently but needs its captures concentrated in shared storage without accidental collisions.	Each professional backs up on their own iPhone or iPad and uploads to the same cloud account. Fieldbox separates each device's stored copy.	Coordinate destination access and naming before the event.
External-drive handoff	A client, editor, or production team needs a physical copy at the end of the day.	Use External Drive Copy to transfer one or multiple sessions to an attached drive, then hand it off without routing the work through a laptop.	External Drive Copy requires active Pro.
Quick Transfer under time pressure	There is little time between sets, cards, locations, or assignments.	Show Quick Transfer starting an all-files session using saved defaults, then return to the job while the transfer progresses.	Use it only when saved defaults match the intended workflow.

NARRATIVE PRINCIPLE

The feature is not the story. The story is the moment work stops living in only one place.

04 / TRAVEL, EMERGENCY, AND DEVICE SCENARIOS

Travel, emergency, and device scenarios

Fieldbox is useful wherever removable media carries work that has not reached a normal backup system.

SCENARIO	HUMAN NEED	WHAT TO ILLUSTRATE	BOUNDARY
Travel abroad without a laptop	Travel light without postponing backup until returning home.	Connect the card reader to an iPhone or iPad, make a verified local copy, and add an offsite copy when connectivity allows.	A compatible reader, cable, power plan, and enough device storage are still required.
A copy waiting offsite	A theft, accident, or lost bag should not remove every copy in the same physical location.	Replicate the session to a user-chosen cloud or NAS destination away from the creator: home, office, studio, production company, or other offsite location.	Do not call a copy offsite if the destination is physically traveling with the creator.
Emergency after an accident	A camera has been dropped, soaked, or damaged and the memory card may not remain readable for long.	If iOS can still read the card, start a transfer immediately and make another verified copy before attempting other work with the media.	Fieldbox does not repair a damaged or unreadable card and cannot guarantee recovery.

Beyond the still camera

DEVICE	USE CASE	WHAT TO SAY CAREFULLY
Dashcam	Copy incident or travel footage before the card is reused or returned to the vehicle.	Video preview depends on the format and codec.
GoPro	Back up action footage in the field and place it in the same session as stills or sound from the day.	Some formats may copy successfully without native preview.
360 camera	Archive proprietary files such as .insv, .insp, .360, and .osv, then export or replicate them for later work.	Do not claim native stitched preview or Photos compatibility.
Audio recorder	Bring interviews, ambience, performances, or production sound into the unified session through another transfer.	Playback depends on iOS support for the audio format.

SHARED VALUE

Different devices can create different file types. Multiple transfers let the creator concentrate them into one coherent Fieldbox session before the files move on to editing, delivery, or longer-term storage.

Creator guidance and feedback

Give creators room to make the story theirs while keeping the demonstration accurate.

A useful content structure

1. Situation	Where are you, what did you just capture, and why does it matter?
2. Pressure	What could delay the job or leave the work in only one place?
3. Action	Show the card, reader, iPhone or iPad, and the relevant Fieldbox workflow.
4. Visible proof	Show the completed session, copy inventory, cloud destination, shared working file, or external-drive handoff that is actually relevant.
5. Honest reaction	Explain where Fieldbox fits, what surprised you, and what you would change.

Feedback we actively want

• What was confusing? • Where did you hesitate? • What took longer than expected? • Which camera, recorder, card, and reader did you use?	• Did any file type behave differently? • What would make this part of your normal workflow? • What did you expect to find but could not? • Would you use it again? Why or why not?
---	---

Accuracy and privacy guardrails

- Use your own words and honest experience. Praise is not required.
- Hide client names, private filenames, account details, access keys, and destination credentials.
- Describe what Fieldbox observed or completed. Do not promise that files are permanent, guaranteed recoverable, or impossible to lose.
- Do not say Fieldbox repairs corrupted cards, decides when a card should be erased, or provides live tethering in 1.4.
- Use only the cloud and NAS destination types shown in Fieldbox.

OFFER FOLLOW-THROUGH The complimentary month is the publishing window. One released Reel or TikTok earns a one-year license. Three or more videos released during that same month earn a lifetime license. Each qualifying video must be public, at least 20 seconds long, and feature Fieldbox as a meaningful part of the video. Tracking: Include #FieldboxBackup and #FieldboxCrew01 in the published caption. Submit each video separately at fieldbox.app/creators/crew01-2026/submit/. Disclosure: Fieldbox gave me complimentary access to try the app.	INTERNAL FUTURE OPPORTUNITY - NOT IN 1.4 Live tethering could strengthen event and production workflows later. Record creator demand and specific camera/workflow needs, but do not demonstrate or present it as a current feature.
